It's not packed in a setup kit, so you can copy the downloaded files to a custom location on the HDD and simply double-click the executable to launch the program. Otherwise, you can keep it stored on a USB flash disk to easily run it on any PC. Just keep in mind that you must have .NET Framework and DirectX installed. On the other hand, the app doesn't add new entries to the Windows registry. As far as the GUI is concerned, Little Alarm Clock Portable adopts a standard window with a well-structured layout, where you can create as many alarms as you want. Create multiple alarms with customized settings It's possible to set the alarm at a sharp time or on countdown (10, 20, 30, 45 or 60 minutes), as well as make it run once, daily, during workdays or in the weekend. Plus, you can enter an alarm message and customize the font, indicate the preferred snooze time (minutes), play the default alarm sound or a custom WAV track, repeat or disable the alarm. These properties can be edited anytime, or you can remove any alarm entry from the task list if you change your mind. The application can be asked to autorun at every Windows startup. I like the fact that you can export the database to XML, because it would be easy to transfer to another computer. It's not free. It crashes sometimes. And you can't create more than one alarm. I have no idea how to add sound to the alarms, so I just use it to wake me up. I did like how it updates, but it would be better if you could cancel an alarm easily. You must have
